Setting up my enviroment

Notes: setting up R enviroment by loading `tidyverse` and 'palmerpenguins' packages

```
library (tidyverse)
```

```
## -- Attaching core tidyverse packages ------------------------ tidyverse 2.0.0 --
## v dplyr     1.1.2     v readr     2.1.4
## v forcats   1.0.0     v stringr   1.5.0
## v ggplot2   3.4.2     v tibble    3.2.1
## v lubridate 1.9.2     v tidyr     1.3.0
## v purrr     1.0.1
## -- Conflicts ------------------------------------------ tidyverse_conflicts() --
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()    masks stats::lag()
## i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to become errors
```

```
library(palmerpenguins)
```

Visualization

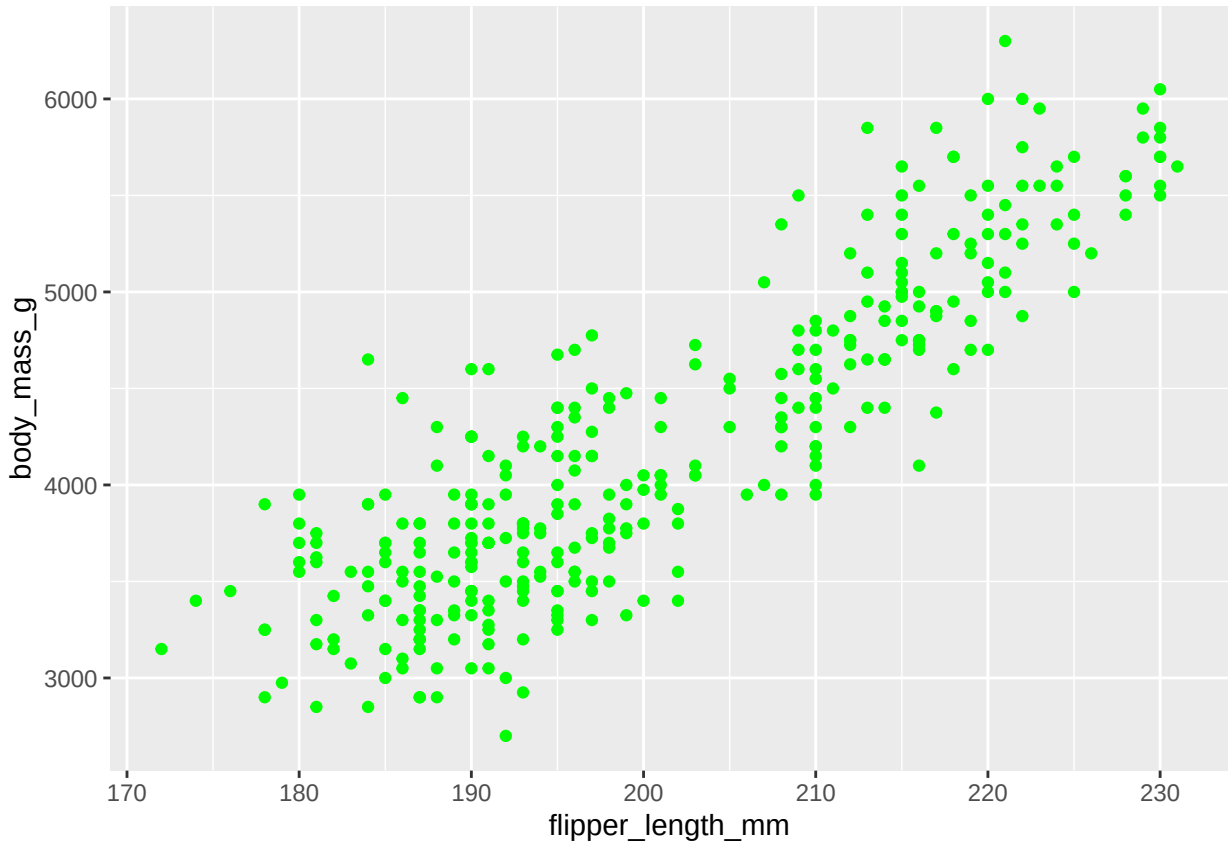
Displaying series of visualizations.

Flipper and body mass in green

Here I displayed the realtionship between flipper length and body mass.

```
ggplot(data=penguins,aes(x=flipper_length_mm,y=body_mass_g))+
  geom_point(color="green")
```

```
## Warning: Removed 2 rows containing missing values (`geom_point()`).
```

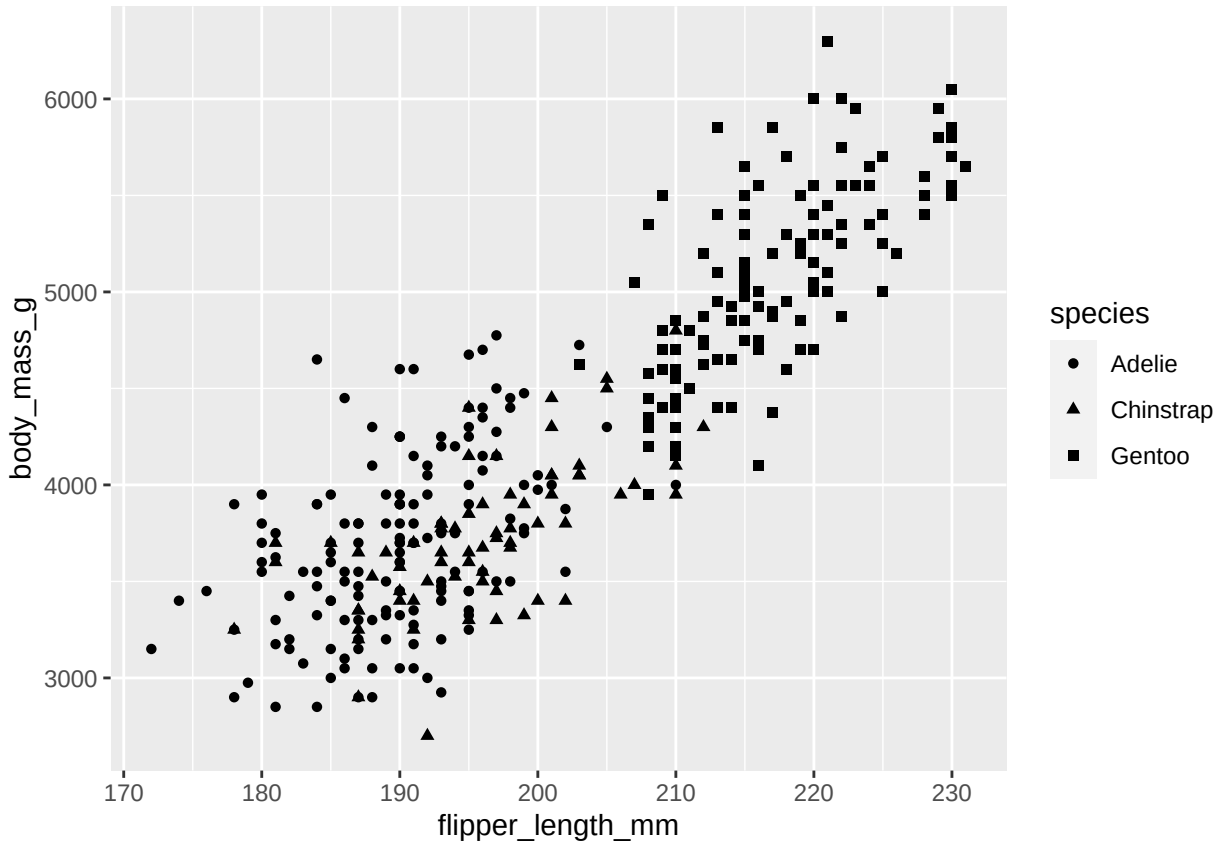


Flipper and body mass by species

Flipper length and body mass are broken down by species

```
ggplot(data=penguins,aes(x=flipper_length_mm,y=body_mass_g))+
  geom_point(aes(shape=species))
```

```
## Warning: Removed 2 rows containing missing values (`geom_point()`).
```



Flipper and body mass by species and sex

Here we plot flipper length and body mass and break it down by species and sex.

```
ggplot(data=penguins,aes(x=flipper_length_mm,y=body_mass_g))+
  geom_point(aes(color=species,
                 shape=species))+
  facet_wrap(~sex)
```

```
## Warning: Removed 2 rows containing missing values (`geom_point()`).
```
